DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

1. Species I: A nematic liquid crystal display device having two stable states in the absence of an electric field and formed by anchoring break, wherein the two stable states correspond to two textures of liquid crystal molecules, wherein the liquid crystal molecules form a levorotatory liquid crystal.
2. Species II: A nematic liquid crystal display device having two stable states in the absence of an electric field and formed by anchoring break, wherein the two stable states correspond to two textures of liquid crystal molecules, wherein the liquid crystal molecules form a dextrorotatory liquid crystal.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 6, 8, 9, 11, 13, and 15 recite limitations of Species I.

Claims 7, 10, 12, 14, and 16 recite limitations of Species II.

The following claim(s) are generic: 1-5, 17 and 18-25.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species I and Species II recite features of two distinct types of liquid crystals, levorotatory and dextrorotatory.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does

not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

In addition, it is noted at this time that claim 8, which depends upon claim 6, fails to further limit the recitation "the optical delay $\Delta n d = 200 \pm 40$ nm" or 160-240 nm of claim 6, as claim 8 recites an optical delay range of $\Delta n d = 210 \pm 50$ nm or 160-260 nm. Correction is recommended.
